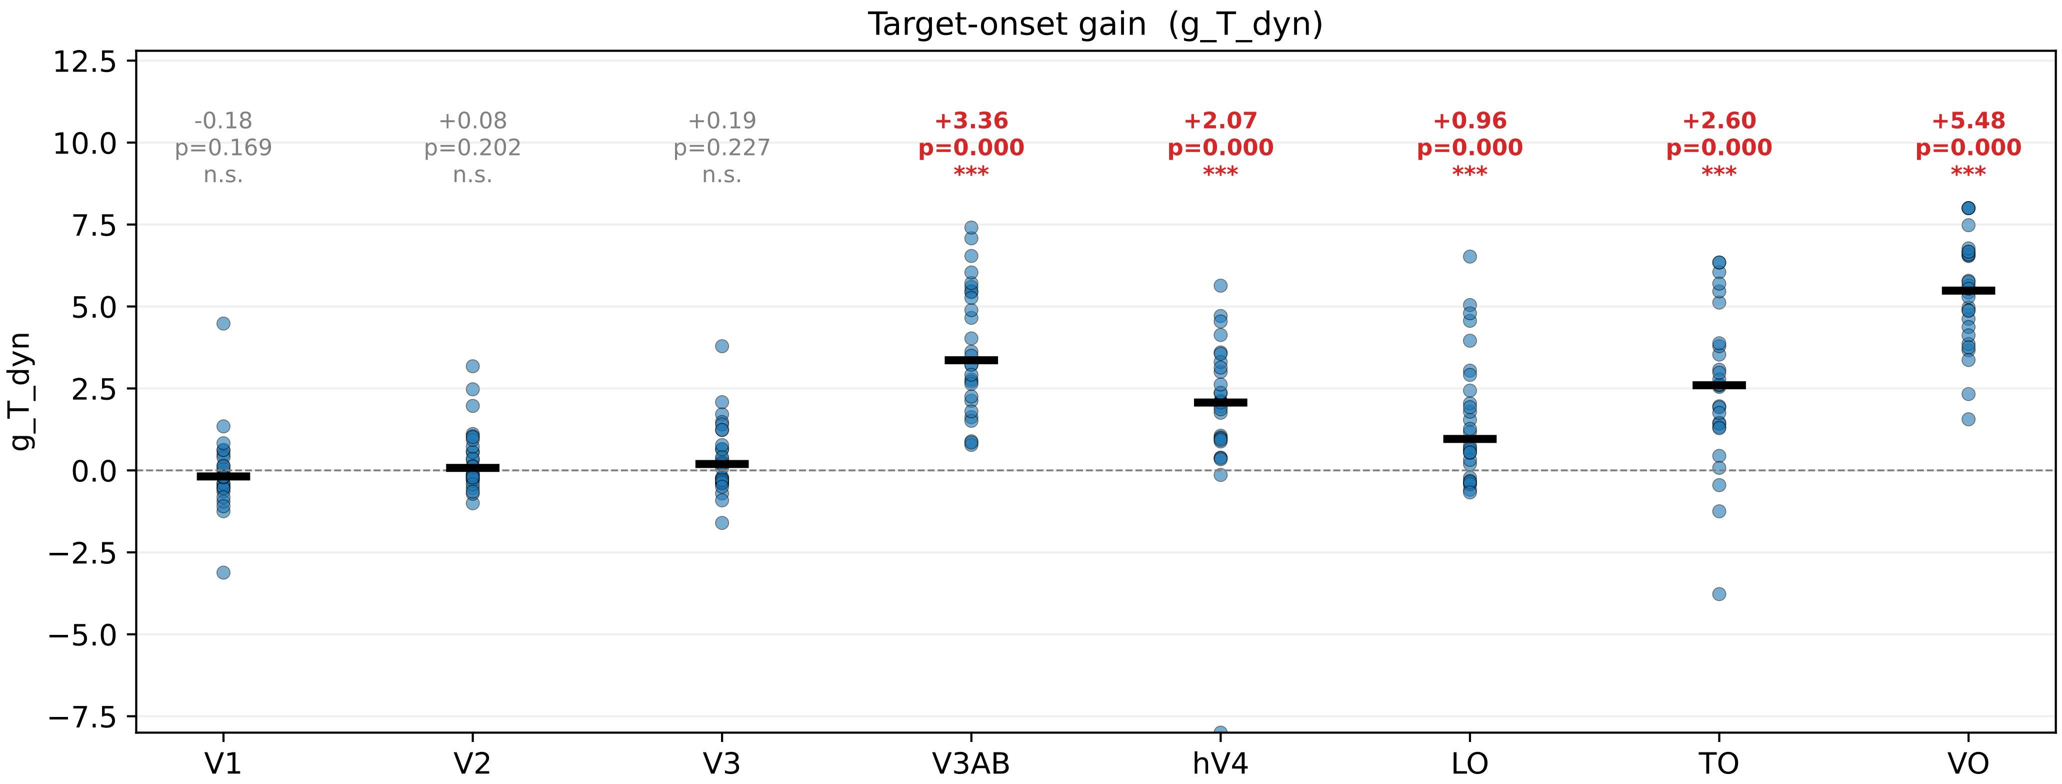
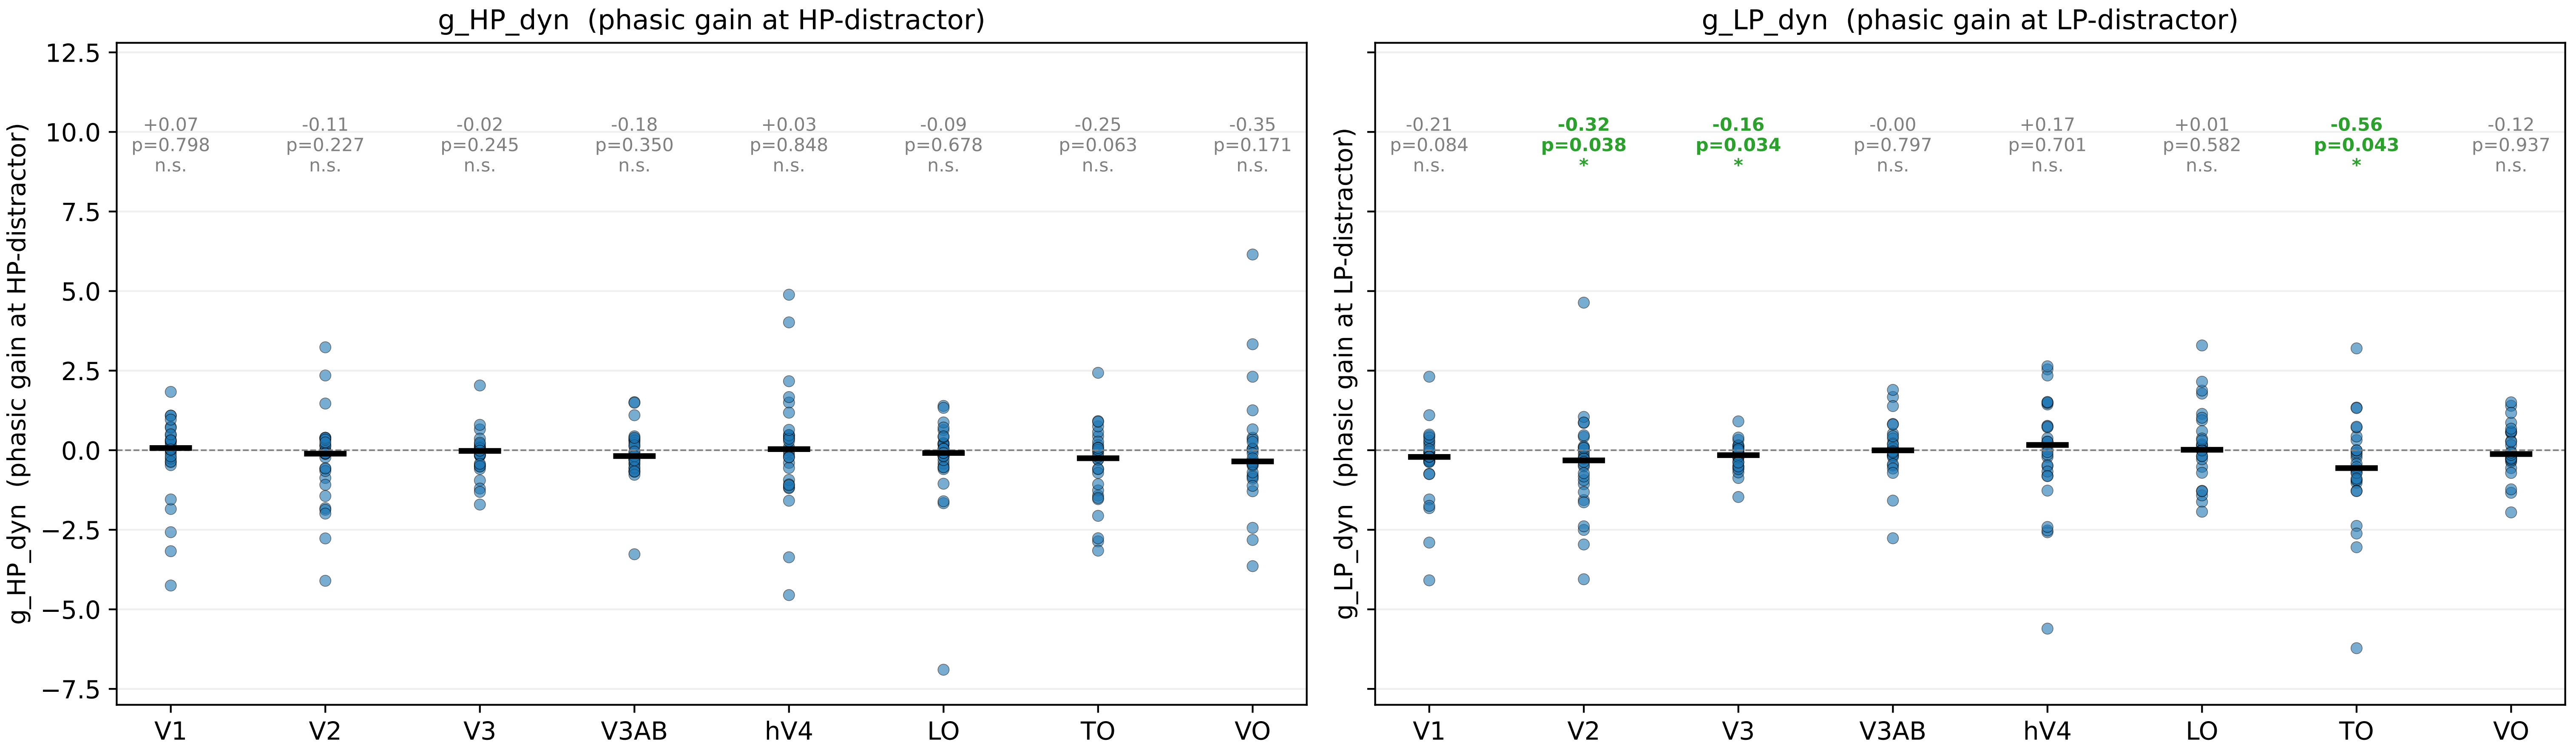
DoG dyn-v3 + target sharedSigma — PHASIC TARGET-CAPTURE gain (n=29)

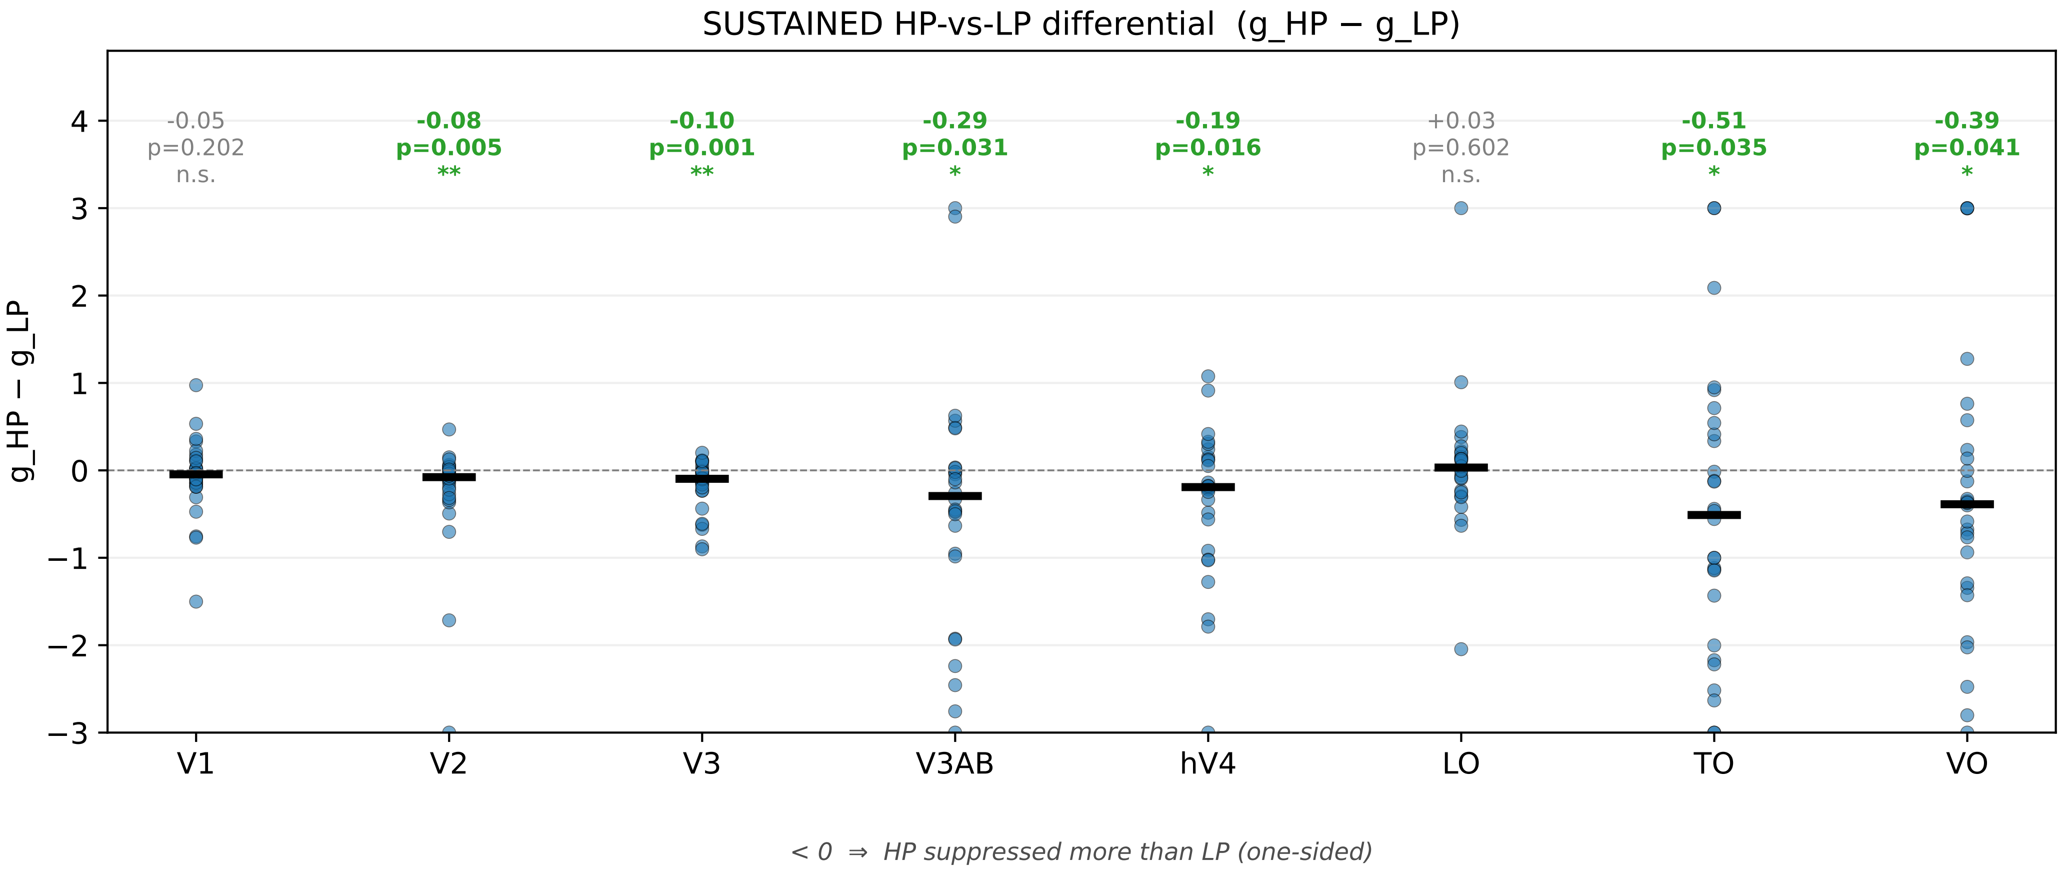


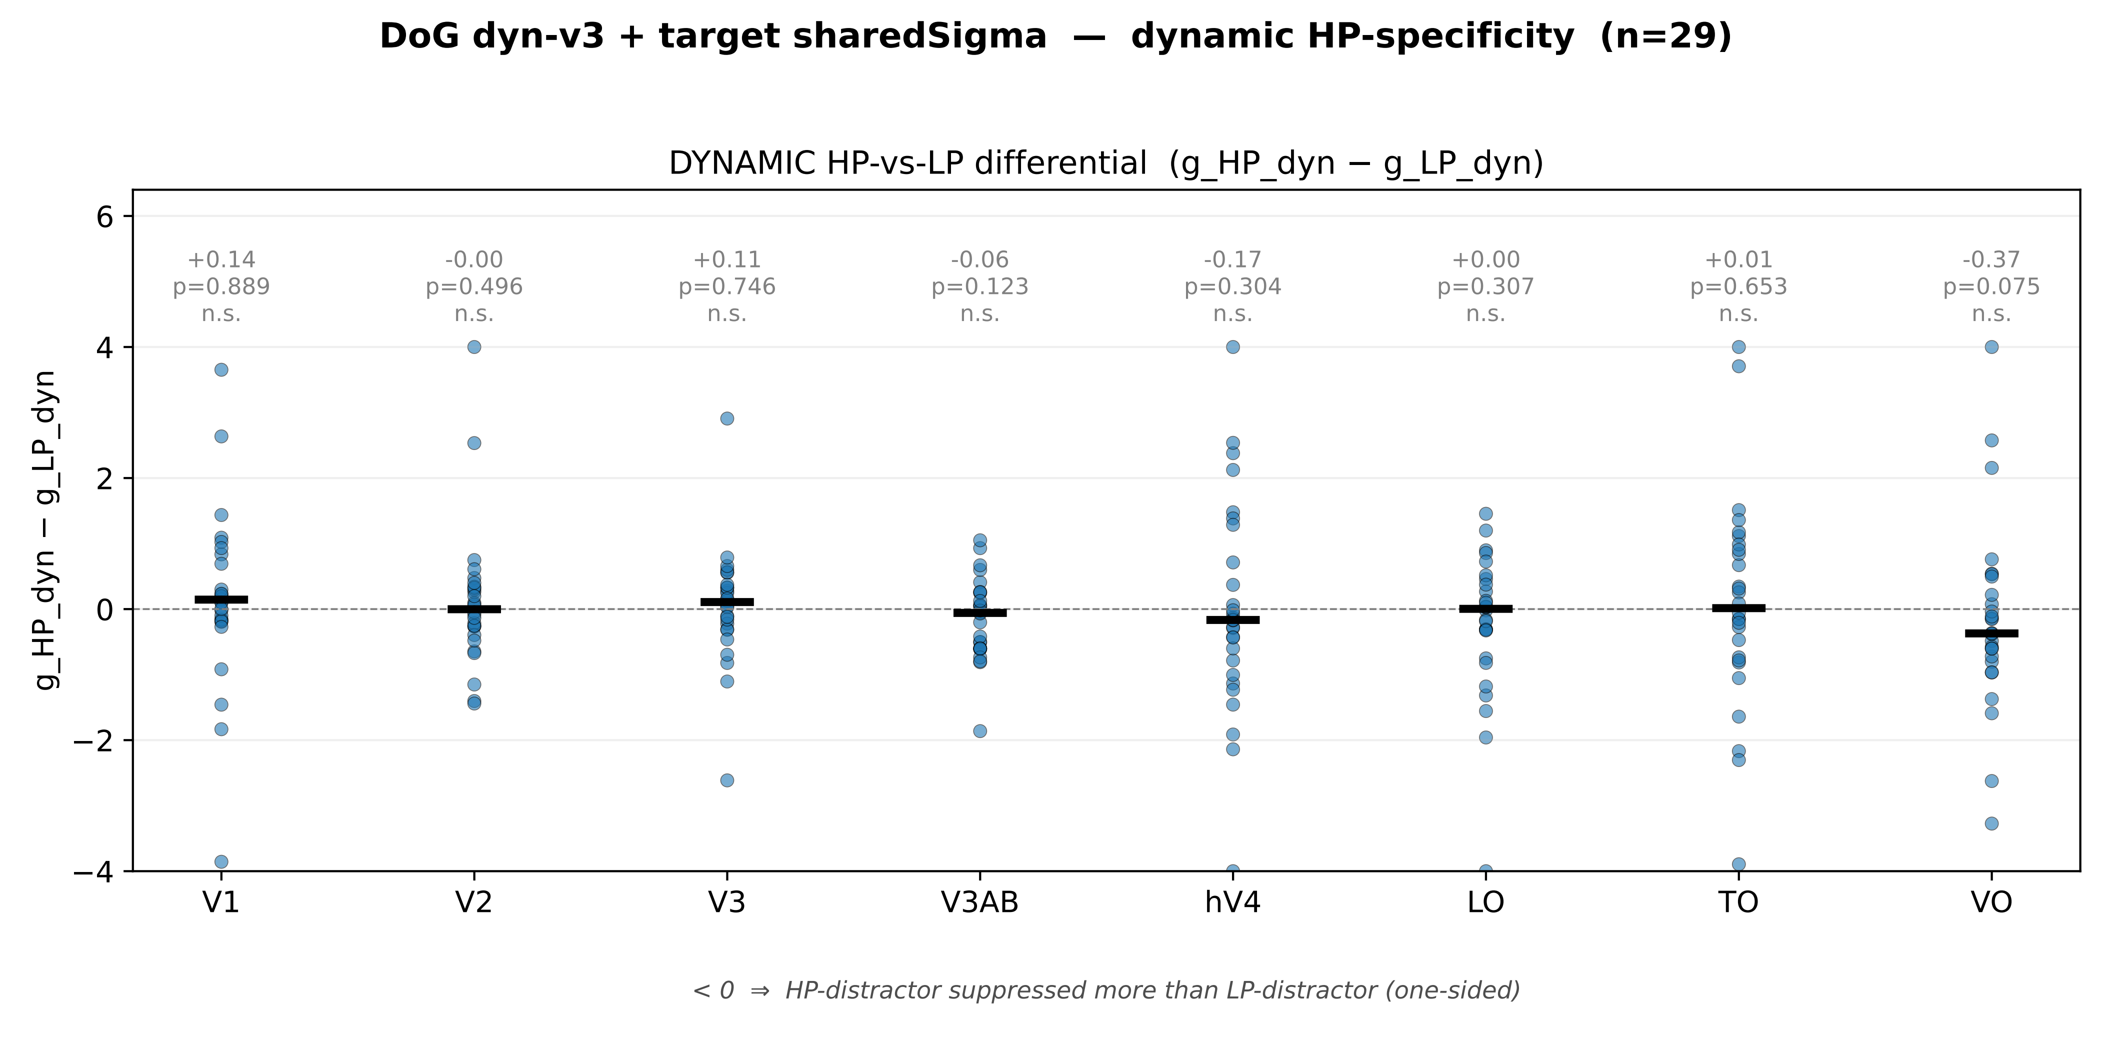
> 0 ⇒ attentional CAPTURE at target location (the predicted positive control)

DoG dyn-v3 + target sharedSigma — RAW dynamic-distractor gains (survives target expansion?) n=29



DoG dyn-v3 + target sharedSigma — sustained HP-specificity (n=29)





DoG dyn-v3 + target sharedSigma — dynamic HP-specificity (n=29)
DYNAMIC HP-vs-LP differential (g_HP_dyn − g_LP_dyn)
g_HP_dyn − g_LP_dyn
