

Two attention-field models — AF vs AF+

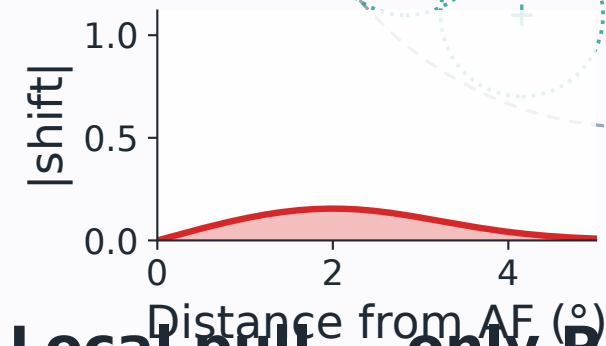

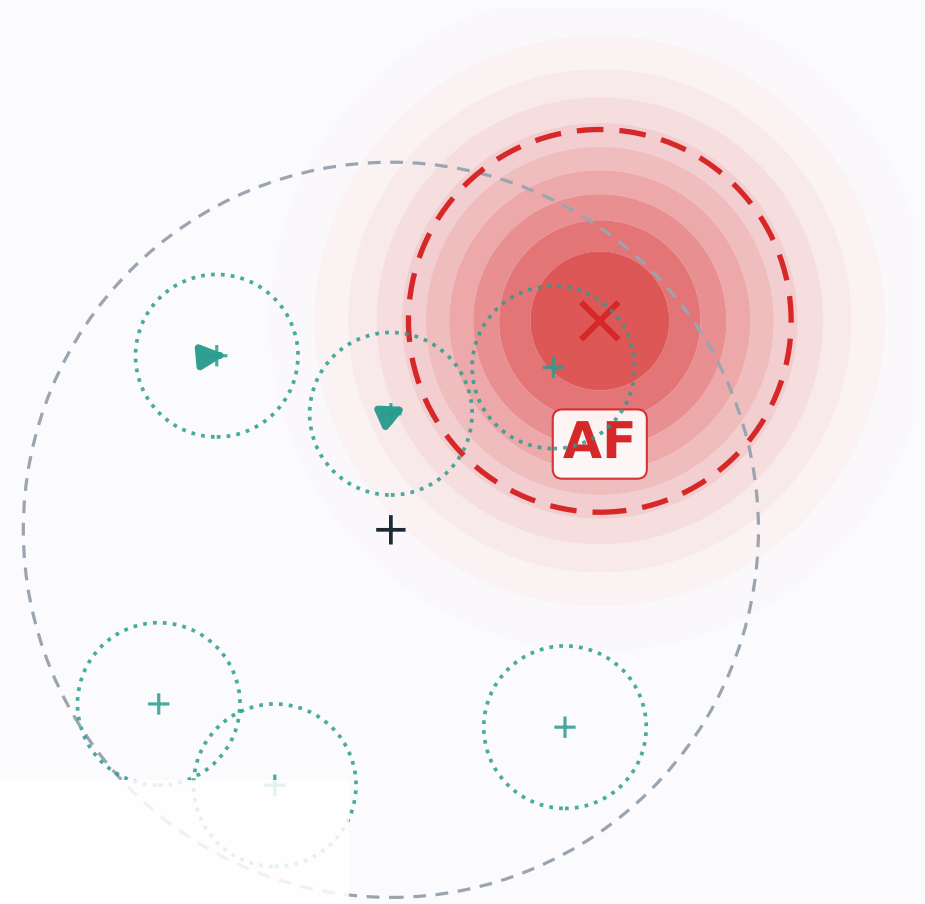

$$\text{AF} : R = A \cdot S$$

$$\text{AF+} : R = (aA + b) \cdot S$$

Global pull — every PRF shifts

Reynolds & Heeger 2009 • Klein, Harvey & Dumoulin 2014

Local pull — only PRFs near the AF shift

Abdirachid (2026) Ch. 2

⇒ **AF+ matches data • retsupp uses $M = 1 + g \cdot G$ (= AF+) fit jointly, not post-hoc**
