

The diagram illustrates the trial timeline for a target trial and a factor trial. It features a central circular area with a dashed green border, containing several green circles with solid green borders and a dotted green inner border. These green circles represent the trial timeline for the factor trial. The background is divided into three main regions: a top-left orange region labeled "target trial)", a bottom-left blue region labeled "factor trial)", and a bottom-right red region. The orange region contains a dashed orange circle with a solid orange inner circle. The blue region contains a dashed blue circle with a solid blue inner circle. The red region contains a dashed red circle with a solid red inner circle. The central area is filled with a light gray background and contains several small black dots and a central black cross. The text "Trial timeline" is written at the bottom center.

Distractor
(this trial)

A horizontal timeline diagram. The top row is labeled 'HP' and has a light red background. The second row is labeled $\tau(t)$ in orange and has a light orange background. The third row is labeled $d(t)$ in blue and has a light blue background. Vertical lines mark specific time points: orange solid lines at the top of the HP row, and blue dashed lines at the top of the $\tau(t)$ row. The orange solid lines are at the start, at the first blue dashed line, at the third blue dashed line, and at the end. The blue dashed lines are at the first, second, third, and fourth positions from the left.
