

Effective drive = paradigm $\times$ attention field

$S(\mathbf{x}, t)$ Paradigm drive

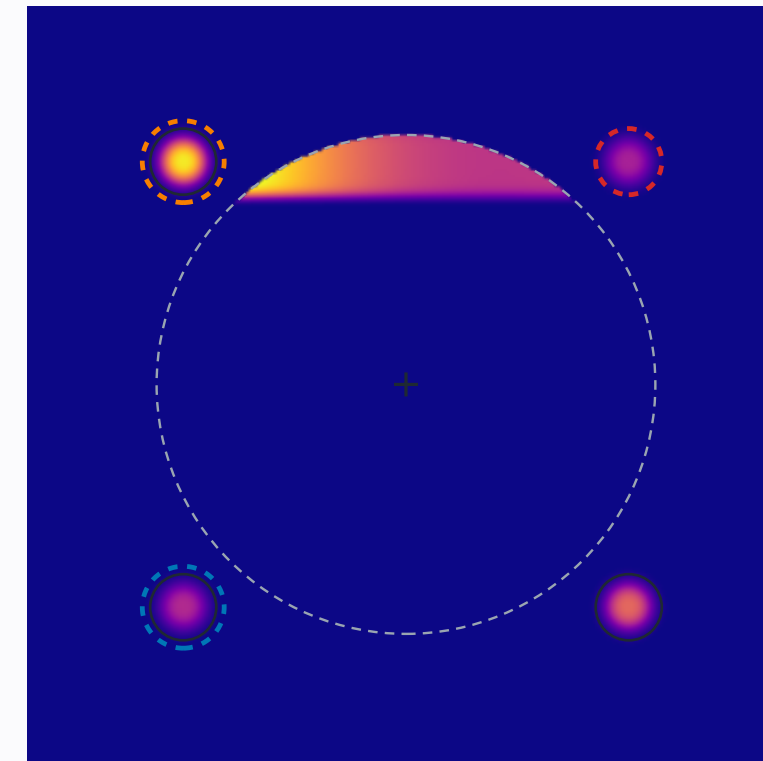

Bar + search array

$M(\mathbf{x}, t)$ Attention field

Blue = suppress, red = enhance

$S \cdot M$ Effective stimulus drive

What the cortex 'sees'

Joint fit (NOT post-hoc): PRF params ($\mu_{\text{PRF}}, \sigma_{\text{PRF}}, \text{amp}, \text{baseline}$, per VOXEL) + gain-field params ($g_{\text{HP}}, g_{\text{D}}, g_{\text{T}}, \sigma_{\text{HP}}, \sigma_{\text{dyn}}$, per ROI $\times$ subject)
