

DoG dyn-v3 — sustained vs phasic AF size (n=30)

σ_{AF} vs σ_{dyn} (DoG dyn-v3)

DoG dyn-v3 — sustained HP-specificity (n=30)

DoG dyn-v3 — dynamic HP-specificity (n=30)

$< 0 \Rightarrow$ HP-distractor suppressed more than LP-distractor (one-sided)

DoG dyn-v3 — RAW sustained gains per ROI (Wilcoxon two-sided vs 0, n=30)
green = significantly negative (suppression); red = significantly positive (capture); grey = n.s.

DoG dyn-v3 — RAW dynamic gains per ROI (Wilcoxon two-sided vs 0, n=30)
green = significantly negative (suppression); red = significantly positive (capture); grey = n.s.

DoG dyn-v3 — net phasic effect of any distractor (n=30)
