

DoG dyn-v3 + target sharedSigma — PHASIC TARGET-CAPTURE gain (n=28)

$> 0 \Rightarrow$ attentional CAPTURE at target location (the predicted positive control)

DoG dyn-v3 + target sharedSigma — RAW dynamic-distractor gains (survives target expansion?) n=28

g_HP_dyn (phasic gain at HP-distractor)

g_LP_dyn (phasic gain at LP-distractor)

DoG dyn-v3 + target sharedSigma — sustained HP-specificity (n=28)

DoG dyn-v3 + target sharedSigma — dynamic HP-specificity (n=28)

$< 0 \Rightarrow$ HP-distractor suppressed more than LP-distractor (one-sided)

DoG dyn-v3 + target sharedSigma — RAW sustained gains (green=suppression / red=capture) n=28

g_HP (sustained gain at HP location)

g_LP (sustained gain at LP locations)

DoG dyn-v3 + target sharedSigma — net phasic distractor effect (n=28)

DoG dyn-v3 + target sharedSigma — spatial extents n=28
